Education

UdeG - Centro Universitario de Tonalá — Tonalá, Jal
Bachelor of Engineering in Computer Science — Jan 23 – Present

Experience

Oracle — Remote
Software Engineer Intern — Sept 2025 – Present

Software Engineer experienced in securing, modernizing, and maintaining enterprise diagnostic and fleet-management platforms across Python and Java environments.

- Investigate complex security and production defects by tracing data flows, execution paths, and trust boundaries.
- Remediate SQL injection, path traversal, unsafe XML parsing, shell execution, TLS validation, sensitive logging, and access-control weaknesses.
- Improve system reliability through timeouts, input and file validation, resource controls, and asynchronous-process troubleshooting.
- Modernize legacy code and automated tests using Java, Python, SQL, JUnit, and Mockito.
- Strengthen release quality by removing obsolete components, improving packaging, and maintaining configuration assets.
- Deliver work across the full lifecycle: Jira triage, implementation, security testing, regression validation, code review, QA handoff, and merge preparation.

Universidad de Guadalajara — Remote
Tech Lead — Sept 2026 – Present

- Cross-Functional Team Leadership: Direct and mentor 3 teams of student engineers and designers, driving Agile sprint planning, technical spikes, GitHub issue management, and peer code reviews.
- Academic Evidence System (V1 to V2 Evolution): Co-led a peer development team to architect and launch V1; currently manage the support pipeline while steering the system architecture, API redesign, and feature roadmap for Version 2.
- Becas CUT Platform (Engineering & Security): Lead the development of the centralized scholarship system, driving SSO/SIIAU authentication, real-time QR-code meal validation, and automated rule engines for student eligibility.
- Institutional Design System Initiative: Founded a dedicated UI/UX team to build the university's official digital brand guidelines, translating design theory into reusable component libraries and visual tokens across campus apps.
- Technical Governance & Quality: Standardize REST API contracts, database schemas, and Git branching strategies to enforce clean code architecture and streamline developer onboarding across all active projects.

Universidad de Guadalajara — Remote
Internship — Sept 2025 – Jun 2026

- Gathering and definition of system requirements for project scope
- Design of user interface views with React and backend architecture with Spring Boot
- Development and implementation of frontend components using React and Tailwind
- Development and integration of backend services using Java (Spring Boot)
- Implementations of an additional microservice with Node.js (Express)
- Collaboration in ensuring consistency between design, functionality, and microservices integration

Skills & Interests

Technical: Git, GitHub, Docker, Docker Compose, Python, Flask, Java, Spring Boot, Angular, React, Tailwind CSS
Language: English (fluent), Spanish (native), Portuguese (beginner)
Interests: Game development in C++
